

COLLABORATIVE *Mental Health* Care

Check out the **NEW**
collaborative
Mental Health care
PediaLink course at:

www.pedialink.org/cme/mentalhealth

Many—in fact, most—primary care clinicians cite a lack of referral sources as a major barrier to expanding their role in mental health care. The purpose of this course is to address this barrier. With an easy to use format, this course is available 24/7 from your home or office computer!

With the *Collaborative Mental Health Care* PediaLink course, in 1 hour primary care clinicians will be able to:

- Identify needs that require emergency specialist care
- Determine other clinical circumstances that require specialty mental health or substance abuse services
- List key services needed by children and adolescents experiencing mental health and substance abuse problems and identify the professionals trained to provide them
- Describe methods for making effective referrals to mental health or substance abuse specialists
- Describe models of collaborative mental health practice
